WEARNES  
Enabling Solutions

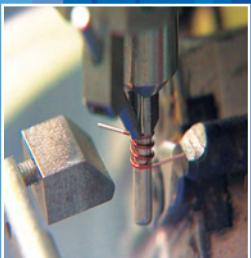

Electro-mechanical & Inductive Components

# Introduction

HQ Singapore

## Cambion® - The story so far

The Cambridge Thermionic Corporation was founded in the 1930's in Cambridge, Massachusetts USA. The name Cambion® being derived from the first four and last three letters of that name.

The company quickly established a reputation in the USA as a quality supplier of small electro-mechanical and electronic components for the military and professional electronics markets.

In 1961 a parallel manufacturing facility was established in Castleton, Derbyshire, England to service an ever-expanding global market.

During the 1980's ownership changes gave rise to various name iterations such as Midland Ross, IPI Limited & Hollingsworth.

In 1991 the Singaporean multi national Wearnes Corporation acquired the organisation to support its objectives for a greater Global presence.

## Cambion® - world-class manufacturing

As the history shows Wearnes Cambion have a long and established pedigree for high performance electro-mechanical and inductive components serving the professional, automotive, military, aerospace and industrial markets. Wearnes Cambion are committed to ongoing product development, products are constantly reviewed and updated for strategic fit to meet the ever changing marketplace.

Continual Investment, especially in the latest machinery, has resulted in substantial manufacturing and assembly capabilities to cover a broad and comprehensive range of disciplines and technologies. The unbeatable combination of modern materials and processes carried out by highly skilled

operatives ensure the highest possible quality is achieved. Wearnes Cambion brings together extensive experience and knowledge to offer a full design and prototype service. Engineers are able to provide a solution to a customer's individual requirements where standard components may not be suitable. Wearnes Cambion can also offer access to low cost manufacture via the Wearnes facilities in mainland China and Malaysia.

Wearnes Cambion is a full-accredited ISO9000:2000 facility, in addition Cambion has been awarded several service and system distinctions from its blue chip customer base.

# Our Business

## Wearnes, your total manufacturing solution partner

Wearnes Cambion works closely with its associated group facilities in the Far East, supporting the Electronics market with an array of services and products, ranging from precision electronic components and assemblies, PCBA, Die Casting, to full turnkey box build devices.

Wearnes Electronics Shenyang facilities and Wearnes Electronics (Malaysia) are dedicated to providing OEM, ODM and EMS services for industry. Products and services include: inductive components, electronic connectors and assemblies, miniature switches, anti-theft devices sensors, PCBA, full box build and many more. With a dedicated precision moulding and stamping capability along with an R & D centre, it is capable of supporting small to large projects. In addition to ISO9001, accreditation has been gained with ISO14001, OHSAS18001 and TS16969.

Wearnes Precision (Shenyang) is a leading precision engineering provider, specialising in aluminium die-casting, extrusion and CNC machining, In-house tool shop facility allows the fabrication production tooling and maintenance, thus streamlining production expenses and minimising customer response times.

Active in all electronic markets, but particularly strong in the automotive sector. In addition to ISO9001, it is also accredited with ISO14001, OHSAS18001 and TS16969.

Shenyang facility

## Our vision helps us focus

**Mission** - We strive to be a world class company in our core businesses, empower our staff to excel, ensure best customer satisfaction, maintain high standards of corporate governance and fulfil our role as a responsible corporate citizen.

**Vision** - To be a global company which embraces innovation, exceptional business practices and values

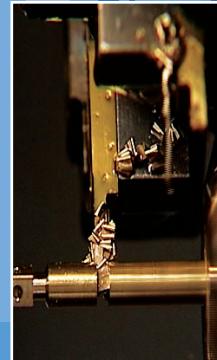

### Values

**Upholding Integrity** - Integrity guides our interactions with shareholders, customers, the community and stakeholders

**Championing Innovation** - Innovation is key to our future growth and development

**Fostering Teamwork** - Teamwork enables us to achieve results based on a common identity, vision and purpose

**Ensuring Excellence** - Excellence eliminates mediocrity and constantly drives us to do better

# PART NUMBER STRUCTURE

All information contained herein, including photographs, drawings, specifications and dimensions is believed to be accurate as of the date of publication but is subject to change without notice. Wearnes Cambion Ltd makes no claims or warranties as to the use of the products contained in this publication. The suitability or fitness for any application is the responsibility of the user.

## Dimensions

Dimensions in this catalogue are given firstly in inches with metric equivalents in millimetres in brackets. For example: - .040 (1,02).

## Part Numbering System

All standard Cambion part numbers consist of 13 digits as shown here. Always quote the full Cambion part number when ordering. A full explanation of individual part numbers appears on the individual product pages of this catalogue.

See below for details of stock class, dimensional variable, plating and colour codes

### Cambion Stock Class Codes

120 Solder terminal pin type	450 Single pole sockets	558 Variable coils shielded
140 Solder terminal slotted	460 Connector pins	570 Insulated terminals
160 Solder terminal - turret	461 Connector plugs	571 Insulated terminals
180 Solder terminal - eyelet	506 Insulators	572 Insulated terminals
360 Plug components	550 Chokes moulded	
400 Battery holders	551 Chokes moulded	
410 Component clips	553 Chokes encapsulated	
435 Tooling	555 Inductors	
445 Patch cords	556 Variable coils unshielded	

**Basic Part No** - This group of four digits gives the specific part number allocated to the product.

**Dimensional Variable** - This group of two digits is used where a choice of a particular dimension is available. This is normally used where a pin, cage jack or solder terminal is offered with a variety of shank lengths to suit different board thickness (for example see 460-2970). This portion of the part number may also be used to indicate a choice of dimensions between pin centres of a shorting link (see 461-2871) or the length of a patch cord (see 445-3306). In the case of inductors or chokes this would determine the inductance value of the part (see 550-3399). Where only one option is available -01 is always used (see 450-3704).

**Plating Finish** - This group of two digits is used to define the plating of the product. You should refer to the catalogue page for actual plating specifications but in general the following codes are used.

Plating Code	Plating	Plating Code	Plating
-00	No plating	-06	Gold/tin
-01	Silver	-07	Cadmium
-02	Nickel	-08	Bright alloy
-03	Gold	-09	Hot solder dip
-04	Electro-tin	-10	Hot tin dip
-05	Electro Solder		

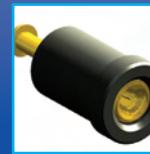

Note also that in the case of standard chokes, these two digits indicate inductance tolerance

Dash Number	Tolerance
01	± 5%
02	±10%
03	±20%

**Colour Code** - The final group of two digits indicates the colour of the product. It is used where some portion of the product, normally an insulator, is made of a plastic material. See 450-4352 as an example.

Dash Number	Colour	Dash Number	Colour
-00	No colour	-15	Green
-10	Black	-16	Blue
-11	Brown	-17	Violet
-12	Red	-18	Grey
-13	Orange	-19	White
-14	Yellow	-20	Natural

## Current Rating and Current Carrying Capacity

When an electric current passes through a connector interface, resistance heat is generated. The first passage of current across a newly mated connector where there is a defined interface resistance causes a minute local temperature rise and extremely small metal-to-metal "welds" to take place across the interface; this phenomenon is expected and results in an uninterrupted metal path across the interlace. As the current increases, the size of these minute welds increases up to a point, but in Single Pole Sockets and other separate connectors, they are still small enough to break apart on separation without visible impairment of the plating. As the current is increased more, further heating takes place not just in the plated films but in the pin and spring metal themselves. The heating, if significant and of long duration, can cause metallurgical deterioration of the finishes. This usually manifests itself by darkening of the luster of the finishes and is explained by migration of the metal atoms between plating and subplating and chemical activity with oxygen and certain air pollutants through ever present minute pores in the exterior plating.

It is sufficient to say that connector reliability can be jeopardized by long-term excessive current.

Cooling the connector takes place in two ways: by conducting the heat away via the electrical conductors and by conducting heat to the connector and conductor surfaces where circulating air carries it away by convection. The rate of cooling is affected by the size of the housing and conductors and by how much air circulates around the connector. In conducting the current rating tests, a drawn cup jack was used since it is low in mass and heats up more than any machined body jack with a given current.

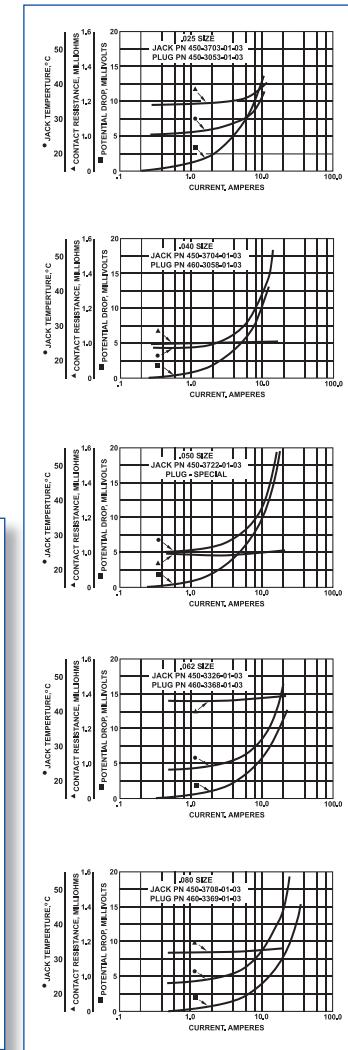

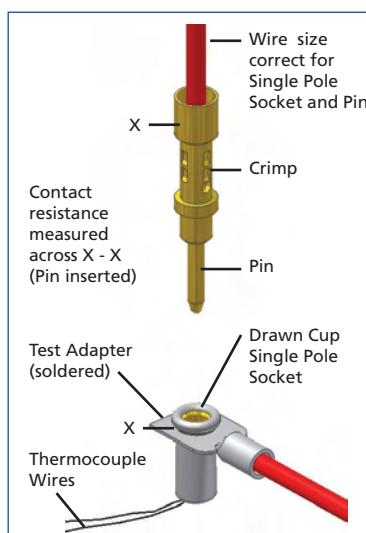

The current rating is determined at CAMBION by first matching the pin size to the conductor size as follows:

Up to .025 (0,64)	dia. 24 AWG
.030 (0.76)	20 AWG
.040(1,02)	20 AWG
.050(1,27)	16AWG
.062(1,57)	16 AWG
.080(2,03)	12 AWO
.094(2,39)	12 AWG

Current Rating is defined as the current which produces one degree Centigrade increase in temperature under these conditions. Contact Resistance is measured at this current.

Maximum Current Carrying Capacity is defined as that current which produces a temperature rise of 30°C when the test is continued above the current rating.

These measurements are made with the Single Pole Socket soldered to insulated wires rather than mounted in printed circuit boards. In this way, variables of the mounting board heat dissipation are eliminated.

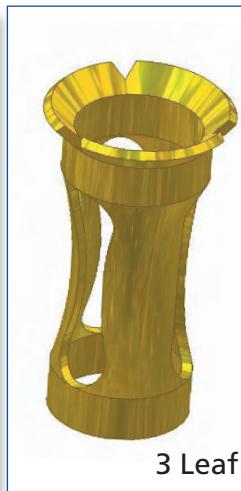

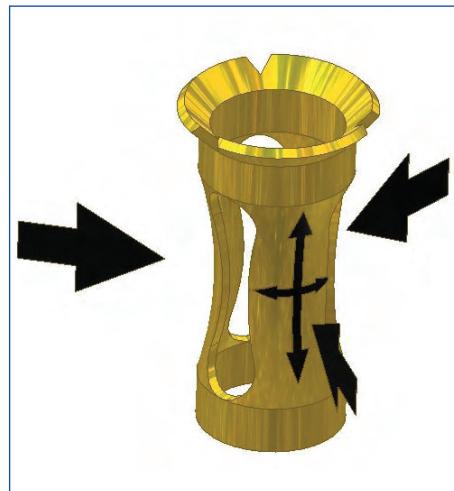

# SINGLE POLE SOCKETS PERFORMANCE DATA

Cambion miniature pins and sockets are specifically designed for quick, tight, space-saving applications on printed circuits. All connectors are electrically and mechanically tested, carefully inspected for dimensional accuracy and, when necessary, subjected to severe environmental tests Cambion pins and sockets are available from stock in a wide range of sizes, materials and finishes to meet virtually every requirement.

Sockets are closed entry cage type. The loose piece socket consists of two pieces - a flexible spring and a housing. The spring formed from beryllium copper is hardened and then plated. Housings may be drawn copper cups or machined from brass depending on application. The spring is securely captivated in the housing by staking. Most loose piece socket connectors are offered with three plating finishes - gold spring and housing, gold spring and electro tin housing or electro-tin spring and housing. Loose piece sockets are available in many styles and sizes to accommodate miniature pins and wires in the range .014 (0,36) to .093 (2,36) diameter. For repeated usage, Cambion recommends that pins to mate with loose piece sockets should be within  $\pm .002$  (0,05) of nominal cage diameter.

## CONTACT CONFIGURATIONS

## SINGLE POLE SOCKET DESIGN FEATURES

### Compound curvature spring

- Longitudinal and circumferential contact.
- Stamped, burr-free heat-treated beryllium copper spring/conductor.

### 3-point contact

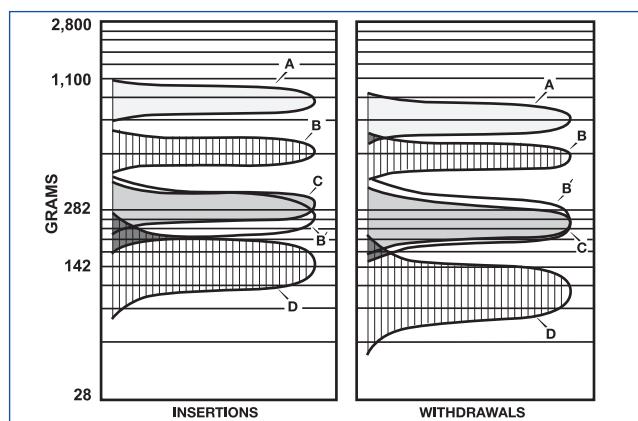

- 60% contact around mating pin.

Pins are precision engineered to be compatible with loose piece sockets and thereby provide positive and lasting electrical connections with low contact resistance. They are offered only gold plated, and pin diameters are held to  $\pm .002$  (0,05).

**Current carrying capacity** and contact resistance for loose piece sockets mated with various pin diameters are shown in the following table

Single Pole Socket Pin Diameter	Average Contact Resistance (mΩ)	@ rated Current For 1°C ΔT (A)	Max. Current For 30°C ΔT (A)
.020"(0,51mm)	1.5	1.4	11.0
.025"(0,64mm)	1.2	1.7	14.2
.030"(0,76mm)	1.1	2.1	17.0
.040"(1,02mm)	1.0	3.0	23.0
.050"(1,27mm)	1.0	3.0	27.0
.062"(1,57mm)	0.56	3.5	30.0
.080"(2,03mm)	0.35	4.0	32.0

## INSERTION / WITHDRAWAL FORCE DISTRIBUTION CURVES

A : .080 (2,03) pin/.080 (2,03) socket

B : .062 (1,57) pin/.060 (1,52) socket

B' : .059 (1,50) pin/.060 (1,52) socket

C : .040 (1,02) pin/.040 (1,02) socket

D : .020 (0,51) pin/.020 (0,51) socket

**Special requirements**, for which there are no standard Cambion connectors, can be met with custom-designed pins and loose piece sockets.

## Electro-Mechanical Custom Design

Cambion are able to assist with Electro-Mechanical component design, either hybrid versions of standard products or to an application specific requirement, supported with fast turnaround of prototypes via its UK manufacturing activity. Additionally Cambion can offer full project management of connector and cable harness developments.

## RF Connectors

Cambion compliments its vast range of high performance connectors and inductive products, with RF Connectors. Specialising in the manufacture of custom variants of industry standards Cambion offers an unique development facility of precision turning and the prototyping of application specials. Styles include N type, 7/16, SMA, SMB, MCX and many more incorporating blind mates and quick termination, with minimal outlay.

Custom converters and adaptors are available theoretically between any standard range of RF Connectors.

## Filtered Terminal

A re-engineering of the standard Cambion 12-28 thread mounted feedthrough terminal now allows greater design choice in terms of capacitance values, tolerances and EMC suppression. Expanding on the standard 1,000pF and 1,500pF values, the terminal can now be offered in any industry recognised capacitance value to tight tolerances. Additionally it can be supplied in Pi or T format filters.

A mounting hardware kit consisting of a lock washer and hex nut is supplied unassembled.

Temperature Range: -55°C to +105°C

For RoHS Compliant add suffix -LF to the part number  
Incremental current, decreases inductance by 5%

								2050

Temperature Range: -40°C to +125°C

Devices are RoHS compliant. Inductance drops typically 10% at DC Max.. with a temperature rise of <15°C

Former : Ceramic

Terminals : Super-adhesion molybdenum/manganese with gold over plating

Preferred tolerance in bold

		30.0µH	7	100	27.0	25.0	23.0	55.0

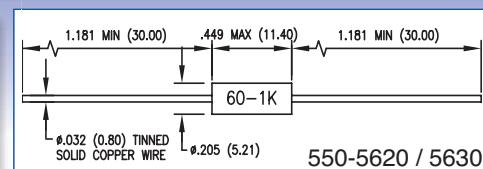

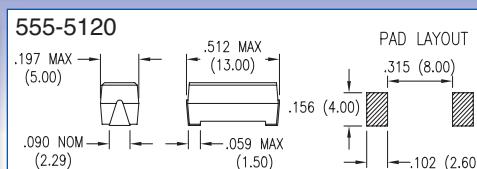

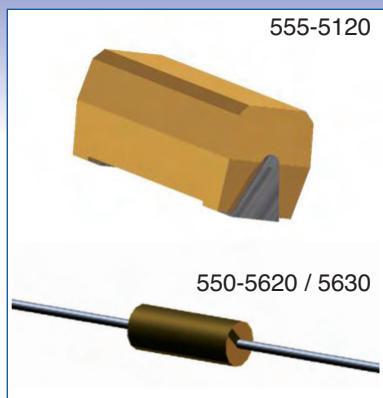

Devices are RoHS compliant

Inductance at I<sub>rated</sub> is a typical inductance value measured when the inductor is subjected to the rated current

Designed to match Zetex ZXCD series Class-D audio solutions

	-81-2	8.10mH	17	125	123

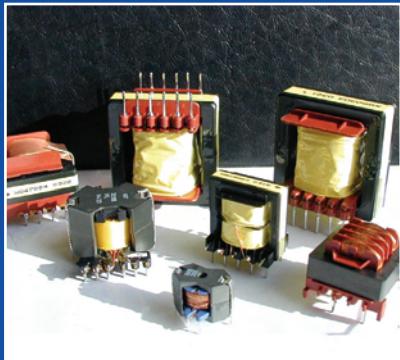

Temperature Range:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$

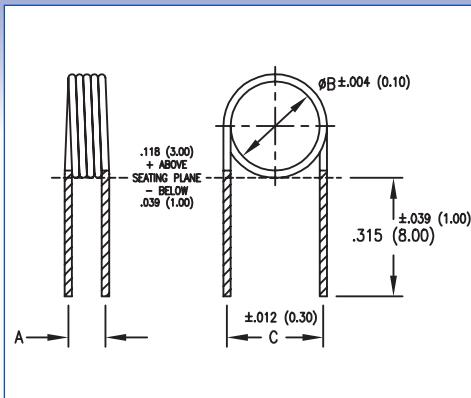

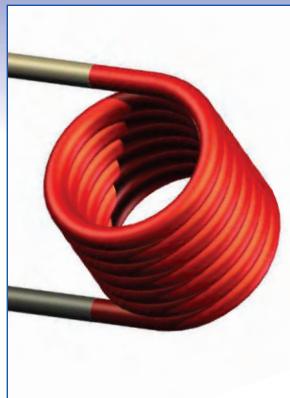

Devices are RoHS compliant  
Supplied on reels of 3,000 pcs on a 330mm reel

## Transformers and custom products

In addition to its standard range of inductive products, Cambion can offer a wide range of transformer types which would be engineered application specific, accommodating power rating from 0.2VA to over 500VA, in through hole, surface mount, open frame and potted styles. Typical application include, DC-DC Converters, AC-DC or DC-AC power supplies.

Additionally Cambion are able to assist with inductive component development, either via a hybrid version of a standard product or to an application specific device requirement. Cambion offers fast turnaround of prototypes to low cost, high volumes via its UK manufacturing activity and Far Eastern associate group facilities.

Cadmium	EN 12329	SAE-AMS-QQ-P-416

## SWAGING TOOL SELECTION

Where appropriate, the part numbers of recommended swaging tools are specified, and in many cases we offer a choice of Roll Punch or Flare Punch. generally we recommend a flared swage where the component will be soldered to an etched pad on the swaged side of the board. Roll swaging is commonly used where the component is to be installed on a plain board.

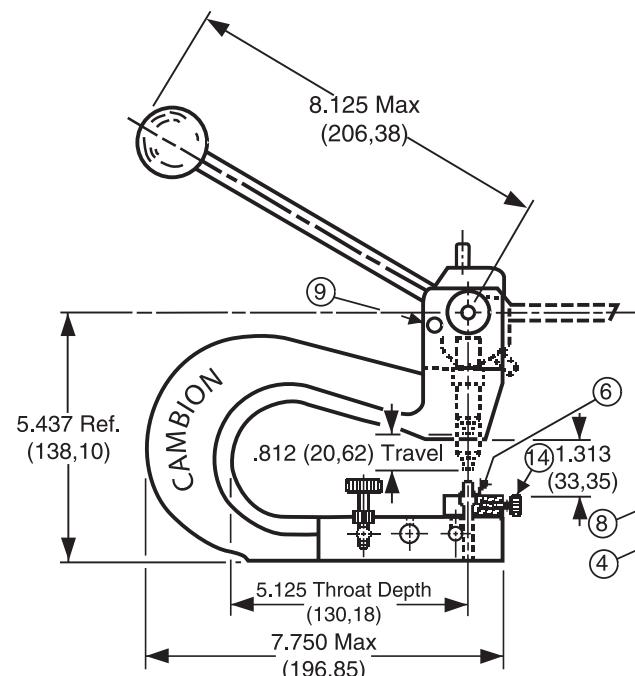

The flared swage is mechanically weak prior to soldering; but after soldering, the solder fillet provides a reliable electrical and mechanical connection. The flare swage is not intended to make the swaged component more than finger tight prior to soldering.

By comparison, the rolled swage is much stronger; however, a void may be formed underneath the swaged collar where flux could be entrapped or air may be present which could cause blowholes if soldered.

Cambion® is a registered trade mark of Wearnes Technology (Private) Limited

## How to order code

435 - 3803 - 01 - 00 - 00

Basic Part No.

## Bench Press Spares

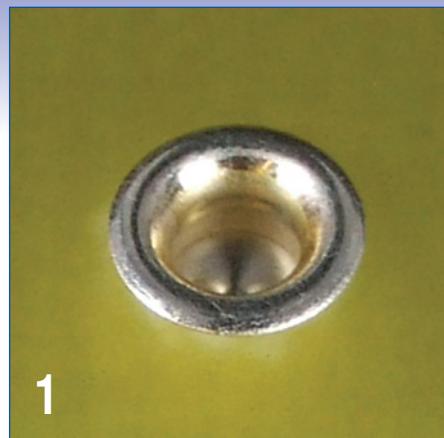

Fig.	Description	Part Number
1	Base, Cast Iron	430-3806-01-00-10
2	Handle Assembly	430-3807-01-00-00
3	Anvil Plate	430-3812-01-07-00
4	Board Support Rod	430-3813-01-07-00
5	Cam Shaft	430-3814-01-00-00
6	Brass Locking Pad	430-3815-03-00-00
7	Domed Hex Nut (was thumb nut) (5/16 - 18)	931-3684-01-29-00
8	Thumb Screw (10 - 24)	330-3811-01-12-00
9	Spring Pin	315-3811-01-00-00
10	Compression Spring	345-3818-01-00-00
11	Punch	See product pages for part number
12	Anvil	See product pages for part number
13	Thumb Nut (10 - 24)	310-3829-01-12-00
14	Set Screw	330-1914-01-12-00
15	Machined Socket Head Screw (8 - 32)	330-0176-07-12-00
16	Set Screw (8 - 32)	330-1914-01-12-00
17	Name Plate	610-5579-01-00-00
18	Drive Screw (No. 4)	330-3820-01-00-00
19	Retaining Ring	345-3821-01-00-00
20	Tool Kit	390-0081-01-00-00

## Tool installation instructions - Stage Instruction

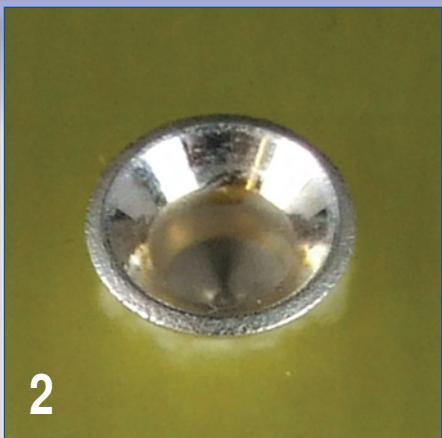

- Loosen screws (15) in anvil plate (3)
- Install anvil (12) in anvil plate (3)
- Remove domed hex nuts (were thumb nuts) (7), cam shaft (5) and handle assembly (2)
- Install retaining ring (19) on punch (11)
- Install punch, inserting through compression spring (10)
- Reassemble handle assembly (2), cam shaft (5) and domed hex nut (were thumb nuts) (7)
- Bring handle forward so that punch (11) touches anvil (12)

- Line up punch and anvil by moving anvil plate (3)
- Lock anvil plate in place by tightening screws (15)
- Adjust anvil height by screwing into anvil plate, so that the clearance between punch and anvil, with handle all the way forward, is slightly less than the thickness of the board to be swaged
- Lock anvil in place by tightening set screw (14)
- Properly locate board support rods (4), (if needed) to fit board to be swaged
- Adjust thumb screws (8) so that the board will be level, and lock in place with thumb nuts (13)

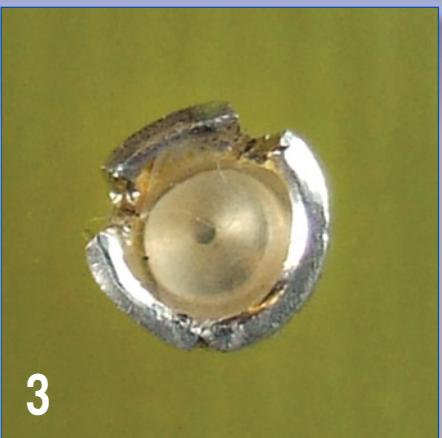

# SWAGING EXAMPLES

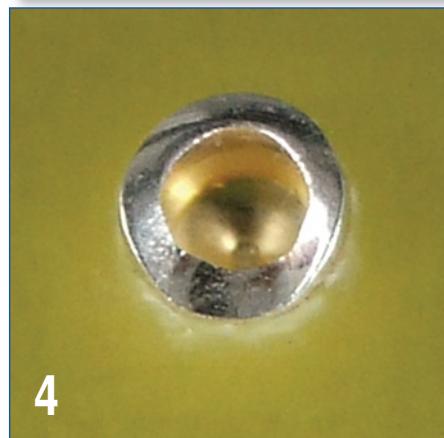

1

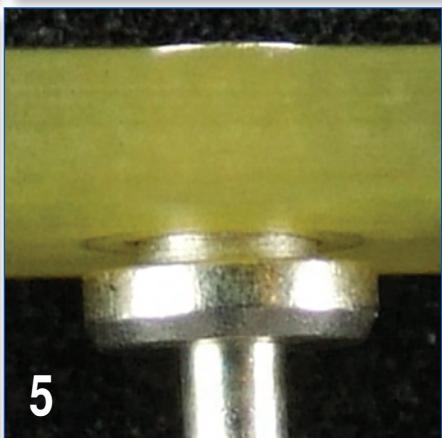

2

3

4

5

6

7

8

9

ITEM	DESCRIPTION	DIAGNOSIS OR CAUSE
1	Good Roll Swage	-----
2	Good Flare Swage	-----
3	Flare Swage	Split, due to excessive pressure and wrong tooling
4	Roll Swage	Damaged swage end due to misalignment of anvil and terminal with punch
5	Flare Swage	Insufficient swage due to improper anvil height adjustment
6	Flare Swage	Terminal swollen due to slightly excessive swaging pressure and anvil height adjustment
7	Bent Terminal	Bent terminal due to lifting board from anvil at an angle
8	Bowed Terminal Board	Board bowed during swaging due to undersized mounting holes in board
9	Damaged Board	Board damaged during swaging due to undersize terminal mounting holes and/or improper swaging tools

# PRESS MOUNT INSULATED TERMINAL MOUNTING DATA

## Mounting Instructions, Drill and Countersink Data

FIGURE 1 A Shank Dia.	FIGURES 2 & 3	
	B Drill Hole Dia.	C CSink Dia.

.216 (5,49)	.203 (5,16)	.238 (6,05)

## MOUNTING PROCEDURE (unless otherwise noted)

Step 1. Drill through-hole and countersink panel according to panel thickness, Figure 2 & 3, see table above.

Step 2. Using an arbor type tool in a suitable press.

Step 3. Press part into centre of panel mounting hole until shoulder of Teflon insulator is fully seated against panel, Figure 4.

Raise tool and the job is complete.

# QUALITY APPROVALS

## CAGE CODE

Wearnes Cambion Limited's cage code is K3105

## REACH

### Registration, Evaluation, Authorisation and Restriction of Chemicals. (REACH) Statement.

Wearnes Cambion Limited has studied the above regulations and at the time of print do not import or manufacture any chemical or articles above 1 (one) tonne from outside the EU. As a result, Wearnes Cambion Limited are classified as a DOWNSTREAM USER, which under the current directive only requires adherence to use purchased materials per manufacturers instructions. Currently Wearnes Cambion Limited do not supply any chemicals or services direct to any customers or sub-contractors, consequently have not registered any of the product contained in this catalogue.

Wearnes Cambion Limited will take all necessary steps to ensure continuation of material supplies (e.g. lubricants, machine coolants, cleaning materials etc.) and services used in processes to manufacture the products contained in this catalogue.

## RoHS

### Restriction of Hazardous Substances. (RoHS) Statement

Wearnes Cambion Limited is committed to offering products that comply with the latest EU directives, however it is recognised that not all applications through exemptions require 'Lead Free' products, consequently Wearnes Cambion Limited will endeavour to offer both RoHS and non RoHS products applicable to customer requirements. Products are clearly defined in the catalogue pages with their RoHS status, thus giving the customer a greater flexibility with product selection. RoHS compliant certificates are available from our web [www.cambion.com](http://www.cambion.com). Please contact our Engineering department with any specific issues.

## WORLDWIDE DISTRIBUTION NETWORK

Cambion products are available throughout the world  
from a network of franchised distributors
